

Physical Games Tracker

Technical Documentation & Code Reference

Self-contained single-file HTML/CSS/JavaScript application for tracking a physical game collection. No server, no build process, no external dependencies beyond Google Fonts.

Author: Andre Silva

1. Overview

All game data, styling, and logic are embedded in one HTML file. Images are loaded from a local `imgs/` subfolder alongside the HTML file.

Property	Value
File	games.html
Architecture	Single-file HTML + CSS + JavaScript
External deps	Google Fonts (Rajdhani, Teko, Barlow) — CDN only
Storage	localStorage for checkmarks + JSON file export/import
Images	Local <code>./imgs/</code> folder — physical box art scans
Browser support	All modern browsers (Chrome, Firefox, Edge, Safari)

2. File & Folder Structure

```
games.html          <- main application (all-in-one)
imgs/               <- physical box art scans
  battlefield-1-ps4.jpg
  halo-3.jpg
  warcraft-iii-reign-of-chaos.jpg
  ... (94 image files total)
games-collection-YYYY-MM-DD.json <- exported save (generated on demand)
```

3. HTML Structure

Section	Contents
head	Meta tags, Google Fonts import, all CSS in embedded style block.
header	Title, subtitle, statistics bar (total titles, owned count, completion %).
div.controls	Search input, Franchise pills, Platform pills, owned counter, Export/Import buttons, Grid/List toggle.
div#output	Dynamic render target — all game cards injected here by JavaScript.
script	All logic: game database array, render engine, filters, localStorage, export/import functions.
footer	Legal disclaimer.

4. CSS Design Tokens

Variable	Value	Usage
--bg	#080c10	Main page background
--green	#52b043	Primary Xbox green accent
--accent	#52b043	Accent colour
--gold	#f0a500	Gold for stats and hover
--white	#e8f0f8	Primary text colour
--muted / --muted2	#3a5068 / #6a8aaa	Secondary and tertiary text
--border	rgba(82,176,67,0.14)	Subtle border
--border2	rgba(82,176,67,0.30)	Stronger border

Variable	Value	Usage
--card-w	170px	Card width in grid view
--radius	10px	Border radius

5. Game Data Schema

Each game is a JavaScript object in the const games = [...] array:

```
{
  f:      "BF",                // Franchise key
  sub:    "Diablo",            // Sub-series (Blizzard only)
  title:  "Battlefield 3",     // Display title (also used as owned ID)
  year:   2011,                // Release year (chronological sort)
  platforms: ["X360", "PS3", "PC"], // Platform code array
  special: null,                // null|Expansion|Remaster|Compilation|Upcoming
  img:    "imgs/battlefield-3.jpg" // Relative path to box art
}
```

Franchise keys:

Key	Franchise	sub field used
BF	Battlefield	No
COD	Call of Duty	No
GOW	Gears of War	No
HALO	Halo	No
BLZ	Blizzard	Yes — Warcraft, World of Warcraft, Diablo, StarCraft, Overwatch, Heroes of the Storm, Classics

Platform codes:

Code	Platform	Code	Platform	Code	Platform
XB	Xbox Original	X360	Xbox 360	XBO	Xbox One
XSX	Xbox Series X	PS1	PlayStation 1	PS2	PlayStation 2
PS3	PlayStation 3	PS4	PlayStation 4	PS5	PlayStation 5
PC	PC Windows	Mac	macOS	NSW	Nintendo Switch
N64	Nintendo 64	SNES	Super Nintendo	GBA	Game Boy Advance
Wii	Nintendo Wii	WiiU	Wii U	SAT	Sega Saturn
MD	Mega Drive	32X	Sega 32X	NDS	Nintendo DS

6. JavaScript Functions Reference

render()

Main function. Applies search text, franchise filter, platform filter. Sorts chronologically, groups by franchise/sub-series, injects cards into #output. Called on every user interaction.

buildCard(data)

Builds a single game card DOM element. Handles image loading with placeholder fallback (shows year + title when no image), click-to-toggle owned state with localStorage persistence, and special badge rendering.

buildFilters(containerId, items, getLabel, getStyle, setFn)

Generic filter pill builder used for both Franchise and Platform rows. Each pill toggles its state and triggers render().

updateStats()

Recalculates and updates header stats (total, owned, percentage) and toolbar owned pill. Called after every state change.

setView(mode)

Switches between grid and list display modes. Grid: image cards. List: compact rows with small thumbnails.

exportOwned()

Serialises the owned Set to JSON and triggers a browser file download. Output filename: games-collection-YYYY-MM-DD.json.

importOwned(event)

Reads a user-selected JSON file, parses the owned array, rebuilds the owned Set, persists to localStorage, re-renders, and shows import count.

7. How to Add a New Game

1. Place the box art image (jpg or png) in the imgs/ folder.
2. Open games.html in any text editor.
3. Find the correct franchise block in the const games = [...] array.
4. Add a new entry in chronological order by year:

```
{f:"BF", title:"Battlefield 6", year:2025,
  platforms:["XSX","PS5","PC"], special:null,
  img:"imgs/battlefield-6-ps5.jpg"},
```

5. Save and refresh the browser. No build step required.

8. Export / Import File Format

```
{
  "version": 1,
  "exported": "2025-04-01T12:00:00.000Z",
  "owned": [
    "Battlefield 3",
    "Halo 3",
    "Warcraft III: Reign of Chaos"
  ]
}
```

The owned array stores game titles matched against the title field on import. The file is human-readable and can be edited manually.

localStorage key: 'owned' — persists per browser/device. Export/Import transfers state between browsers or devices.

9. Complete Game Catalogue

Total: 93 titles across 5 franchises.

Battlefield

Year	Title	Platforms	Special	Image File
2002	Battlefield 1942	PC		battlefield-1942.png
2003	Battlefield 1942: Road to Rome	PC	Expansion	battlefield-1942-road-to-rome.jpg
